

24. Prompt Engineering is the practice of designing effective prompts that help AI system generate accurate results. It is a key skill for ~~any~~ anyone working with AI because the quality of the response often depends on the quality of the prompt.
25. Cloud Computing is the delivery of computing services such as servers, storage, databases, networking, software, and analytics - over the internet.
26. Version control system is a tool that tracks and manages changes to files and source code over time. It helps individuals and teams collaborate efficiently maintain a history of changes, recover previous versions.
27. A Jupyter notebook is an interactive web-based tool used for writing and running code, analyzing data, creating visualizations and documenting results in a single document. It is most commonly used with python making it one of the most popular tools in data science machine learning and artificial intelligence.
28. Python is a high-level, general-purpose programming language that is widely used for software development. Python is a powerful easy-to-learn programming language used for a wide range of applications including web development.
29. Data privacy is the protection of personal sensitive, confidential information from unauthorized access, use disclosure. It focuses on ensuring that individuals have control over how their personal data is collected, stored, shared.

30. Data ethics refers to the moral principles and guidelines that govern how data is collected, stored, shared. Data ethics goes beyond legal compliance and focuses on doing what is morally right when working with data.
31. Data Governance is the process of managing the availability, quality, security, integrity. It consists of the policies, procedures, standards and responsibilities that ensure data is managed properly throughout its lifecycle.
32. Bias is a systematic error that skews results in a particular direction, causing them to be inaccurate, unrepresentative or unfair.
Healthcare: an algorithm used by hospitals to prioritize care was found to be biased against Black patients - because it used historical healthcare costs as a proxy for sickness.
Recruiting: Amazon scrapped an experimental AI recruiting tool that downgraded resumes containing the word ~~new~~ women.
33. Data Analyst analyzes the data collected ~~of~~ in order to be able to tell a story for CEO or management to make decisions.
Data scientist predicts the future based on the data.
Data Engineer create a map between data science and data analytics.
34. ~~Business~~ Business intelligence is a technology-driven framework that transforms raw data into meaningful, actionable insights to support strategic and operational business decisions-making. Retail uses BI dashboard to monitor daily sales per store, inventory turnover and staff scheduling efficiency.

35. The ethical aspects of data ~~base~~ ethics. It's not easy or completely honest that it will be ethical and honest when dealing with data.

36. Data lake. Chat GBT.

37. Our everyday challenges and decisions will be influenced data or AI.

1. Brightlearn information

2. Chat GBT

3. DeepSeek
